

Est. 1956  
THE CLEAN AIR PEOPLE

The MESH Moisture Eliminator filter is effective in reducing Oil, Water and many other vapors and mists including Salt Laden Coastal air.

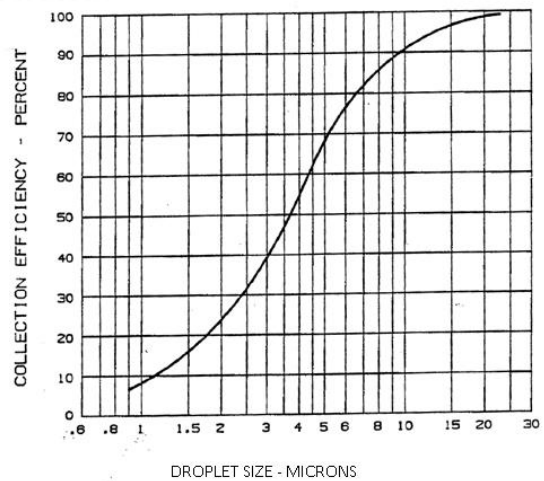

The filter is especially useful in electrostatic fume extractors employed in applications where high volume of moisture is encountered.

The Filter can be manufactured in Stainless Steel, Aluminum or Galvanized steel. Standard sizes are available and non – standard sizes are available on request. Installation of mesh filter must always be installed vertically in order to operate at peak efficiency. Top is marked on each filter to provide proper positioning. Mounting frames must be provided with secure support and adequate drainage.

The Moisture eliminator must be installed vertically to ensure correct evaporation.

Air flow must not exceed 2.54m/s, otherwise the dwell time will be shortened and will not allow full capture of moisture mist.
