THE CLEAN AIR PEOPLE

GREASE AND PARTICLE MESH FILTERS

Description

The Rainbow Grease/Particle Mesh Filter has found wide acceptance for the removal of grease and fat from air carrying cooking vapors in exhaust hoods which prevent costly maintenance to the fan duct work and motor.

Construction

A specially developed aluminium woven mesh is used as the filtering media. This is wound onto an inner frame so that the filter has high grease and particle inline with extraction efficiency.

- Low resistance
- High efficiency
- Best grease retention
- Spark arresntance
- Large capacity
- Robust construction
- Low Initial cost (Aluminium only)
- Easy to clean

Available in thicknesses of 8mm, 10mm, 12mm, 20mm, 25mm, 30mm, 40mm, 45mm and 50mm.

Filters are also available in Stainless Steel mesh.
